

CLAIMS

What is claimed is:

1. A printer system comprising:
 - (A) a support frame, the support frame being adapted to support other components of the printer system;
 - (B) a chassis slidably attached to the support frame, wherein the support frame is adapted to be slid at least partially out of the support frame;
 - (C) a media holder attached to the chassis, the media holder being adapted to hold printable media; and
 - (D) a printer assembly removable attached to the chassis, the printer assembly comprising:
 - (a) a printer, the printer being adapted to print on the media; and
 - (b) a control circuit, the control circuit being adapted to control the printer.
2. The printer system of claim 1 further comprising drawer glides attached to the chassis and the support frame, wherein the chassis may be removed from the support frame by sliding the chassis on the drawer glides.
3. The printer system of claim 1 wherein the printer system comprises a front end, the media holder and the printer assembly being positioned in the chassis in a tandem arrangement, the printer assembly being positioned in front of the media holder relative to the front end of the printer system.

4. The printer system of claim 1 wherein media from the media holder is directed at least partially below the printer assembly, wherein at least part of the media path is exposed when the printer assembly is removed from the chassis.
